Subject: Notice in accordance with Section 8 (e): Results of an in vivo mouse micronucleus screening test with a "substituted heterocycle"

Ladies and Gentlemen:

BASF Corporation is submitting results of an in vivo mouse micronucleus screening test with a "substituted heterocycle" conducted by BASF Aktiengesellschaft, Ludwigshafen, Germany.

The substance is an experimental fungicide

The test substance was tested for its clastogenic (small micronuclei) and aneugenic (large micronuclei) potential in a micronucleus screening test at a single dose of 100 mg/kg body weight using male NMRI mice. The animals were sacrificed 24 hours after a single oral administration.

The following is a summary of the most relevant results:

A statistically significant increase in polychromatic erythrocytes containing both small and large micronuclei was observed.

BASF Corporation understands that reporting of the results from this study under TSCA 8(e) is in accordance with EPA's policy. Please note that a confidential version of this letter is enclosed, treating the chemical identity as confidential business information. The information considered confidential is highlighted, in accordance with U.S. EPA policy.
